Chart 3. Foreigners performing work by sex and place of residence^a in 2024

As at 30 September

^a Data by statistical regions; excluding foreigners performing work living abroad.

Methodological notes

The presented results are part of an experimental study aimed at determining the number of foreigners performing work on the basis of administrative data sources. According to the definition in force in the official statistics system, persons working under civil law contracts are not included in the population of employed persons in the national economy. However, the data presented in the experimental study concern ‘persons performing work’, i.e. employed persons in the national economy and persons working under contracts of mandate and related contracts. Contracts of mandate are counted together with contracts of a related nature to which the provisions of the Civil Code apply and which involve the obligation to be covered by social and/or health insurance at the Social Insurance Institution (ZUS), i.e. agency agreements, service contracts, activation agreements, appointment letters, contracts with members of supervisory boards and managerial contracts having the nature of a contract of mandate. Persons classified as employed who at the same time work under contracts of mandate and related contracts are counted only once and included in the group of employed persons. The analysed population does not include owners, co-owners and leaseholders of individual agricultural holdings (including contributing family workers), as well as persons working under contracts to perform a specified task and farmer’s helpers.

In the case of quoting Statistics Poland data, please provide information: ‘Source of data: Statistics Poland’, and in the case of publishing calculations made on data published by Statistics Poland, please provide information: ‘Own work based on Statistics Poland data’.
